We are conducting a study of small mammalian diversity in Ohio, with emphasis on 10 species of uncommon insectivores and rodents that have not been recorded in Ohio during the last 10 to 30 years. The goals of this project are to gain an understanding of the current distribution and relative abundance of small mammal species in Ohio and to raise public awareness of mammalian diversity and related conservation issues.

**Job Description**
Duties include the preparation of study skins and skulls of small mammals, taking measurements on specimens, and spreadsheet data entry. The work schedule is flexible and the position provides an opportunity to conduct independent study (EEOB 693 or H783).

**Qualifications**
The applicant should be majoring in one of the life sciences, such as animal science or zoology, preferably with sophomore, junior, or senior standing. Previous experience with laboratory work or study skin preparation is desirable but not essential. Applicants must be qualified for employment with the College Work-Study Program; refer to EEOB job #138.
